Species Colour Sheet

GRIZZLY BEAR:

The grizzly bear, is any North American subspecies of the brown bear, such as the mainland grizzly, the Kodiak, the peninsular grizzly and the recently extinct California grizzly. Specialists sometimes call the grizzly the North American brown bear because the grizzly and the brown bear are one species on two continents. In some places, some may nickname the grizzly the silvertip for the silvery, grizzly sheen in its fur.

Its closest relatives are the European cave bear and the polar bear. Except for cubs and females, grizzlies are normally solitary, active animals, but in coastal areas, grizzlies gather around streams, lakes, rivers, and ponds during the salmon spawn. Every other year, females (sows) produce one to four young which are small and weigh only about 500 grams (1 lb). A sow is protective of her offspring and will attack if she thinks she or her cubs are threatened.
